MIKO-7M(A) was received by Shakhtinskteploenergo in April 2021. This milli-ohmmeter corresponds with the description and technical characteristics. We use the instrument to check windings of power and measuring transformers, busbars and other circuit. MIKO-7M(A) is very convenient to use, it also has a case. The settings menu is clear, the functionality is suitable. The milli-ohmmeter has user-friendly interface, automatic measurement selection, high speed and accuracy of measurements. Furthermore, test cables remain flexible even in conditions of subzero temperatures. The instrument fully meets our needs.

With respect,
Acting head of electrical department

A.A. Taliukin
