Referense on instrument

**ATTN: O. N. Ekaterinina,  
Deputy Direcot General**

Dear Olga Nickolaevna,

SPB Elektrosetremont branch of ElektrosetServis UNEG, JSC has been operating the PKV/U3.1 device for a long time. The specified equipment is used for diagnostics and adjustment of air, oil circuit breakers.

Over the indicated time, a positive operation of the device was noted in the diagnosis of circuit breakers in the field. Among the additional advantages, we can distinguish the convenience of a bag for carrying both the device itself and cables, a wide variety of fasteners, which helps to install sensors on different switches and connect to any PC (the program can be installed on a PC in the office or on a personal laptop). We were very pleased with the functionality of the software. Of the shortcomings, only an unprotected instrument case can be noted, but this is compensated by the fact that in rainy weather, most often, repair work is not performed.

We recommend this device to all companies operating circuit breakers in their work, as well as to mobile laboratories involved in circuit breaker diagnostics.

has been operating the PKV/U3.1 device for a long time. The specified equipment is used for diagnostics and adjustment of air, oil circuit breakers.
