of SKB EP, LLC

Review about the use of the devices

Dear Olga Nikolaevna!

Currently, the following devices manufactured by SKB EP, LLC are used at the substations of the Prioksky EMPN:

1. PKV/U3;
2. PKV/M6N;
3. PKV/M7;
4. MIKO-1.

With the help of these devices, all the necessary time and speed characteristics of high-voltage circuit breakers of various types are removed, as well as the transient resistances of the equipment contacts are measured.

All of the above-mentioned devices are easy to operate, have a compact design and light weight. These features allow them to be used directly at the installation site of the equipment that is being repaired.

During the operation, the devices have proven themselves to be good in terms of operation and measurement accuracy.

Acting Deputy Director-Chief Engineer

A.D. Osipenko
