Review of operated instruments

Dear Olga Nikolaevna!

The electrotechnical laboratory DZO N-Resurs, LLC, purchased MIKO-7MA instrument in order to conduct electrical equipment diagnostics (power and matching transformers, high-voltage electric motors) owned by the parent company Uralkali, PJSC.

The instrument has shown itself to advantage during operation. When working with MIKO-7MA instrument, the measurement time is significantly reduced. There are other advantages: low weight, compact size, high measurement accuracy, autonomy (battery availability), that is especially important when working at facilities where there are no power supply sources.

MIKO-7MA instrument can be recommended as a convenient and modern device for diagnostics at energy facilities.

Operational director

M.V. Shvarev
