ATTN: O.N. Ekaterinina
Director General
of SKP EP, LLC

Dear Olga Nikolaevna!

MIKO-7A instrument is in operation in the electrotechnical laboratory of Spectrum LLC.

This instrument is used when measuring the DC resistance of windings (transformers, arc-extinguishing reactors), the resistances of circuit breakers both newly installed and for diagnostic purposes after emergency situations.

During operation the instrument proved to be excellent. It has an intuitive interface, high-quality clamps and quick measurement. The robust housing allows you to count on a long life of the instrument.

The use of MIKO-7M made it possible to abandon the measurement using a DC direct current, which has simplified the measurement procedure and has reduced the time to receive data.

Using the example of MIKO-7M operation, we can conclude about the high quality of the instruments of SKB EP, LLC and recommend them for use.

Head of the Electrotechnical Laboratory

A.I. Kotenev
