### Review of MIKO-21 instrument

Our electrical equipment commissioning team has been operating MIKO-21 micro-ohmmeters in the amount of 3 pieces since 2020. These instruments are used to measure resistance of automatic circuit breakers contact connections the contact resistance of bolted connections and welded joints.

The instrument MIKO-21 has a small weight and is assembled in a convenient, durable case. The instrument menu is simple and user-friendly. When operating 200 A Kelvin double hand spike test cables and 200 A Kelvin C-clamp test cables has been additionally purchased, which expanded the possibilities for instrument connection.

The instrument MIKO-21 has shown itself to good advantage and can be recommended to organizations to perform tests, measurements, commissioning and repair of electrical equipment.

With respect,  
Chief engineer for electrical  
equipment commissioning
