An outgoing letter №15/02 from 10.02.2022

Dear Olga Nikolaevna!

At present the accredited testing laboratory ArmEnergTest of NILED, LLC uses MIKO-10 that is manufactured by "SKB EP", LLC. This instrument has been in operation since 2021. The instrument is used for checking the contact resistance of linear hardware for VL-0.4-6-10 kV. The instrument has proved to be a great one: MIKO-10 is functional and simple, it has a convenient interface and compact size. The main advantage of this instrument is the ability to work from an accumulator battery, which charge is enough to carry out at least 1,000 measurements. There were no malfunctions of MIKO-10 detected during the year of its operation.

We express gratitude to SKB EP, LLC for the manufacture of high-quality and reliable products. We hope for further fruitful cooperation.

Director General
of NILED, LLC

A.N.Zaharov
